- Best Available ORBCOMM Transceiver
- Industrial Strength
- Robust and Reliable Operation
- On-Board Computer Processor

Q1200-SM

The Q1200-SM, is an excellent choice for developers who have the need to integrate a very flexible, intelligent, and user-friendly satellite-based communication modem into their applications. The Q1200-SM is specifically designed to operate over the ORBCOMM® two-way global satellite communications network, and is therefore not limited by cellular coverage boundaries

Similar to QUAKE's Q1200-SG, the Q1200-SM includes a locking interface connector and additional "load dump protection" is designed in. A fully supported application programmer's interface (API) allows developers to utilize the functions of the Q1200-SM to create customized onboard applications. The API includes all the necessary tools to write, compile, and load custom applications onto the Q1200-SM.

Other features of the Q1200-SM include: a Real Time Clock (RTC); 2 serial ports; and 2 configurable digital I/O's. Individual inputs can be specifically configured to continuously monitor sensors and report at selected intervals. Alarm conditions can be pre-programmed so the unit reports the alarm condition automatically and immediately. Routine reports can be generated on a regular schedule, by exception-only reporting, or a combination of both.

The Q1200-SM is versatile, adaptable, easy to use, reliable, and, like all of QUAKE's modems, designed to meet the rugged conditions and extreme environments encountered in the heavy equipment, trucking, marine, and other important industries served by QUAKE.
